

B4T Crop Risk Index (CRI)

A defensible crop risk index for breeding decisions

STATUS	Active development
CHAMPION	Bert Lenaerts (IRRI)
PROGRAMME	Breeding for Tomorrow

Sample brief. This document is generated from the Climate Hub use-case portfolio to show the intended format. The use case name, programme, status, champion and description below are the real portfolio entries. The framing sections that follow are illustrative placeholders and do not yet represent agreed scope, commitments or findings.

About this use case

Clarifying, auditing and updating the Breeding for Tomorrow Climate and Environmental Crop Risk Index so its hazard inputs, scoring logic and prioritisation role are methodologically defensible and use current climate data where feasible.

Focus areas

- Crop risk index
- Hazard inputs
- Breeding prioritisation
- Climate data audit

How the Climate Hub supports this use case

The Hub curates quality-assured climate and agricultural datasets and links them to the CGIAR use cases they serve. It does not re-host or replace the source platforms: each dataset card routes to the original platform, where licences, access conditions and attribution are governed by the provider. For this use case the Hub's role is to shorten the distance between the question being asked and the authoritative data that can answer it.

Curated platforms available through the Hub

Platform	What it provides	Address
African Agriculture Adaptation Atlas	Spatial climate risk and adaptation options across Africa	adaptationatlas.cgiar.org
Gardian	CGIAR's flagship open data portal	gardian.cgiar.org
AgMRV	MRV for agricultural greenhouse gas emissions	agmrv.org
AgWise	Location-specific climate-smart agronomic recommendations	agwise.org
MapSPAM	Global crop production surfaces at 5 arcminute resolution	mapspam.info
Climate Security Observatory	Climate, conflict and food security nexus	cso.cgiar.org
CGSpace	Open-access institutional repository for CGIAR outputs	cgspace.cgiar.org

Status and next steps

This use case is in active development. Next steps are agreed with the use-case champion and tracked through the Hub's use-case portfolio. Specific milestones, deliverables and timelines are to be confirmed and are deliberately not stated in this sample brief.

Feedback

Comments on this brief, and on the Climate Hub prototype generally, can be sent using the “Give feedback” button on the Hub, which opens a pre-filled email to the Hub team.
