

MELIAF Adaptation Activator

Measuring CGIAR's adaptation potential and benefits

STATUS	Idea
CHAMPION	Andreea Nowak (Alliance)
PROGRAMME	Climate Action

Sample brief. This document is generated from the Climate Hub use-case portfolio to show the intended format. The use case name, programme, status, champion and description below are the real portfolio entries. The framing sections that follow are illustrative placeholders and do not yet represent agreed scope, commitments or findings.

About this use case

Exploring how Hub climate data, intermediate products and methodological expertise can support the MELIAF Climate Adaptation Activator to measure and track CGIAR's adaptation potential and benefits.

Focus areas

- Adaptation tracking
- Adaptation metrics
- Intermediate climate products
- MEL frameworks

How the Climate Hub supports this use case

The Hub curates quality-assured climate and agricultural datasets and links them to the CGIAR use cases they serve. It does not re-host or replace the source platforms: each dataset card routes to the original platform, where licences, access conditions and attribution are governed by the provider. For this use case the Hub's role is to shorten the distance between the question being asked and the authoritative data that can answer it.

Curated platforms available through the Hub

Platform	What it provides	Address
African Agriculture Adaptation Atlas	Spatial climate risk and adaptation options across Africa	adaptationatlas.cgiar.org
Gardian	CGIAR's flagship open data portal	gardian.cgiar.org
AgMRV	MRV for agricultural greenhouse gas emissions	agmrvt.org
AgWise	Location-specific climate-smart agronomic recommendations	agwise.org
MapSPAM	Global crop production surfaces at 5 arcminute resolution	mapspam.info
Climate Security Observatory	Climate, conflict and food security nexus	cso.cgiar.org
CGSpace	Open-access institutional repository for CGIAR outputs	cgspace.cgiar.org

Status and next steps

This use case is currently an idea rather than a committed workstream. It has been logged in the Hub's use-case portfolio so that interest, data needs and potential partners can be gathered before any commitment is made. Scope and feasibility are still open questions.

Feedback

Comments on this brief, and on the Climate Hub prototype generally, can be sent using the “Give feedback” button on the Hub, which opens a pre-filled email to the Hub team.
