

CRI review: data and methods

B4T Crop Risk Index (CRI)

USE CASE	B4T Crop Risk Index (CRI)
PROGRAMME	Breeding for Tomorrow
CHAMPION	Bert Lenaerts (IRRI)
STATUS	Review not yet written up

Sample review document. The use case, programme, champion and review headings below are the real structure this review follows. The content under each heading is placeholder text: no assessment has been recorded here, and nothing in this document should be read as a finding, a criticism or a recommendation.

Scope of the review

The completed review sets out what was examined, what was found and what follows, with each point traceable to the data, code or documentation it came from. This sample carries the structure only, so that the format and level of detail can be agreed before the substantive review is written up.

Hazard inputs currently used

The completed review sets out what was examined, what was found and what follows, with each point traceable to the data, code or documentation it came from. This sample carries the structure only, so that the format and level of detail can be agreed before the substantive review is written up.

Scoring logic and weighting

The completed review sets out what was examined, what was found and what follows, with each point traceable to the data, code or documentation it came from. This sample carries the structure only, so that the format and level of detail can be agreed before the substantive review is written up.

Currency of the underlying climate data

The completed review sets out what was examined, what was found and what follows, with each point traceable to the data, code or documentation it came from. This sample carries the structure only, so that the format and level of detail can be agreed before the substantive review is written up.

Defensibility for breeding prioritisation

The completed review sets out what was examined, what was found and what follows, with each point traceable to the data, code or documentation it came from. This sample carries the structure only, so that the format and level of detail can be agreed before the substantive review is written up.

Gaps and open questions

The completed review sets out what was examined, what was found and what follows, with each point traceable to the data, code or documentation it came from. This sample carries the structure only, so that the format and level of detail can be agreed before the substantive review is written up.

Suggested next steps

The completed review sets out what was examined, what was found and what follows, with each point traceable to the data, code or documentation it came from. This sample carries the structure only, so that the format and level

of detail can be agreed before the substantive review is written up.
