

Country brief: Gender and climate

Generated by the CGIAR Climate Data Hub Flyer Builder

COUNTRY	Kenya (sample selection)
AUDIENCE	GCF proposal team (sample selection)
TOPIC FOCUS	Gender and climate
LENGTH	2 pages

Sample output. This is a demonstration of the Flyer Builder's intended format and length. The section structure, sources panel and layout are what the finished tool will produce. The narrative below is placeholder text: it contains no findings, figures or country-specific analysis, and must not be cited or circulated as evidence.

Differentiated exposure

In the finished tool this section is assembled from the latest CGIAR evidence for the selected country, audience and topic, with every claim carrying an inline citation back to its source dataset or publication. The reviewer edits the draft before export. In this sample the section is left deliberately empty of substance so that the format can be judged without any risk of placeholder numbers being mistaken for findings.

Access to resources and services

In the finished tool this section is assembled from the latest CGIAR evidence for the selected country, audience and topic, with every claim carrying an inline citation back to its source dataset or publication. The reviewer edits the draft before export. In this sample the section is left deliberately empty of substance so that the format can be judged without any risk of placeholder numbers being mistaken for findings.

Decision-making and voice

In the finished tool this section is assembled from the latest CGIAR evidence for the selected country, audience and topic, with every claim carrying an inline citation back to its source dataset or publication. The reviewer edits the draft before export. In this sample the section is left deliberately empty of substance so that the format can be judged without any risk of placeholder numbers being mistaken for findings.

Options that close gaps

In the finished tool this section is assembled from the latest CGIAR evidence for the selected country, audience and topic, with every claim carrying an inline citation back to its source dataset or publication. The reviewer edits the draft before export. In this sample the section is left deliberately empty of substance so that the format can be judged without any risk of placeholder numbers being mistaken for findings.

Sources this brief would draw on

The Hub curates and links; it does not re-host. Every source below routes to its original platform, where licences, access conditions and attribution are governed by the provider.

Platform	What it provides	Address
African Agriculture Adaptation Atlas	Spatial climate risk and adaptation options across Africa	adaptationatlas.cgiar.org
Gardian	CGIAR's flagship open data portal	gardian.cgiar.org
AgMRV	MRV for agricultural greenhouse gas emissions	agmrv.org
MapSPAM	Global crop production surfaces at 5 arcminute resolution	mapspam.info
Climate Security Observatory	Climate, conflict and food security nexus	cso.cgiar.org
CGSpace	Open-access institutional repository for CGIAR outputs	cgspace.cgiar.org

How to use a brief like this

- Treat the generated draft as a starting point, never as a finished product.
- Check every citation against its source before the brief leaves your desk.
- Edit for the audience: a ministry official and a journalist need different framing.
- Record the generation date, since the underlying datasets are updated on their own cycles.

Feedback

Comments on this sample, and on the Flyer Builder concept, can be sent using the "Give feedback" button on the Hub.
